# On the Subject of Brawler Database

*Who needs an interspace anyways when we can just use a database!*

This module is a database containing the data of all Bakugan brawlers from the Bakugan universe. It has two displays, one with the picture of a brawler and one with glitchy text. There are also 5 buttons that say Name, Home, Attribute, Faction, and Restore.

However, the database was recently hacked and after some repairs it seems some data values stored on the displayed brawler were lost. To solve this module these missing data values must be manually restored. Luckily a paper copy of all data values for each brawler are in this manual on the next few pages following the format below. Each one that was lost will be indicated by a flashing red LED next to the button that corresponds to that data value. Clicking one of these buttons will select it and the glitchy text display will display a piece of data pertaining to that data value. Pressing the glitchy text display now will cycle to the next piece of data for that data value and so on until it loops. Whatever is left on the glitchy text display when pressing a new data value button or pressing Restore will be what is checked in the restoration process. Pressing Restore will start the restoration process and check to make sure that all missing data values were restored correctly.

If a missing data value was not restored correctly, a strike will be recorded and the module will return to its initial state, updating all red LEDs.

| Picture of Brawler |
