On the Subject of Custom Keys

Internet's cool.

There will be two keys and a connection code at the top of the module. To solve the module, turn both keys.

The keys must be turned before and after certain modules on the bomb are solved. To figure out what these modules are, enter the code on the module at ktane.timwi.de/HTML/Custom%20Keys.html.

If the wifi icon below the module glows red and the display reads "Error," the keys can be turned at any time in any order.
